Himachal Pradesh E-Waste Management Tracker

A data-driven overview of collection, recycling capacity, and formalization

Presented By
RIYA VARTHA

Current E-Waste Scenario

Total Generated

530.3 tonnes of e-waste generated in Himachal Pradesh.

Total Collected

193.1 tonnes formally collected through the current system.

Collection Rate

36.4% of estimated generated e-waste is formally collected.

E-Waste Collection Performance

EPR Achievement

EPR collection achievement is approximately 96%, indicating strong compliance among participating entities.

Collection Centres

Himachal Pradesh has 52 collection centres supporting formal e-waste channelization across the state.

Highest Generation Region

Solan is the highest e-waste generation region, highlighting the need for focused collection and monitoring.

Recycling Capacity & Utilization

Installed Capacity

3,450 tonnes/year of authorized recycling capacity is available across Himachal Pradesh.

Processed This Year

1,200 tonnes processed this year, indicating substantial room to increase throughput.

Capacity Utilization

Approximately 35% of installed capacity is currently utilized.

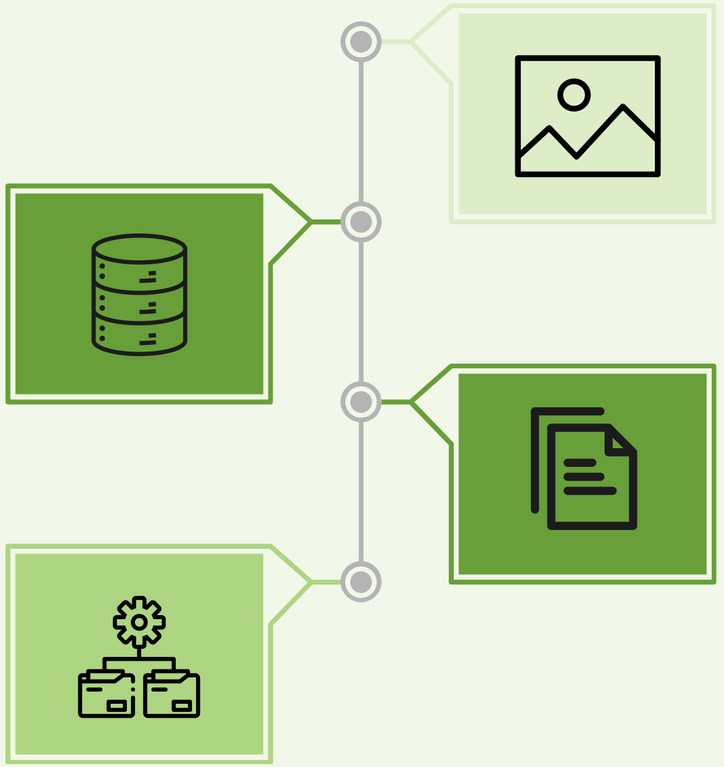

Key Challenges in E-Waste Management

Low Collection Rates

Only 36.4% of estimated e-waste is formally collected, leaving a substantial gap between generation and recovery.

Under-Utilized Recycling Capacity

Available recycling infrastructure is operating below potential, with capacity utilization at approximately 35%.

Limited Informal Sector Integration

Informal e-waste workers remain insufficiently connected to authorized collection and recycling systems.

Pb/Cd Contamination Hotspots

Lead and cadmium contamination in hotspot areas underscores the need for stronger monitoring and safer handling practices.

Recommendations & Conclusion

Expand Collection Access

Expand collection centres and drives, connecting households, retailers, and institutions with authorized recyclers.

Formalize Informal Workers

Train and formally integrate informal e-waste workers to strengthen safe collection and recycling pathways.

Strengthen Monitoring & Awareness

Improve environmental monitoring, compliance, and public awareness while using existing recycling capacity more effectively.
